-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see page 4, fifth paragraph, filed 4/12/05, with respect to the rejection(s) of claim(s) 10 under 102(e) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Kondo et al. (5,900,687).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Kondo et al. (5,900,687).

Regarding claim 10, Kondo et al. shows a terminal structure (Figure 2) for interconnecting coil ends in a plural phase rotary electrical machine and adapted to be mounted at one axial end of a core (top, Figure 1) having a plurality of circumferentially spaced pole teeth (1) around which electrical coils (2) are wound, said terminal structure comprising a plurality of conductors (3) equal in number to at least the number of phases (3 phases) and bonded (column 4, lines 25-35) in spaced relationship to each other, each of said phase being comprised of a plurality of interconnected conductors

(3a) each having at least two circumferentially spaced terminal end portions (3b) for receiving a coil wire end from a respective one of said coil windings (Figures 6 and 7).

Regarding claim 11, it is noted that Kondo et al. also shows the phases being axially spaced from each other (Figure 4).

Regarding claim 12, it is noted that Kondo et al. also shows the each phase-specific terminal member being made of plural connecting pieces comprised of arcs of concentric circles (Figure 2).

Regarding claim 13, it is noted that Kondo et al. also shows the interconnected conductors of each of the phases all lying in a common axial plane (Figure 6).

Allowable Subject Matter

4. Claims 1-7 and 9 are allowed.
